R.TIFFANY ASSISTANT PROFESSOR DEPARTMENT OF COMMERCE HOLY CROSS HOME SCIENCE COLLEGE THOOTHUKUDI

# INTRODUCTION

- The measures of central tendency or average enable us to compare two or more distributions pertaining to the same time period or within the same distribution over time.
- According to Clark, "Average is an attempt to find one single figure to describe whole of figures."

Measures of central tendency include

- ✓ Mean
- ✓ Median
- ✓ Mode

#### Mean can be classified into

- Arithmetic Mean
- Geometric Mean
- Harmonic Mean

#### **Arithmetic Mean**

- The most popular and widely used measure of representing the entire data by one value is known as arithmetic mean.
- It is obtained by adding together all the items and by dividing this total by the number of items.
- Arithmetic Mean is of two types. They are
  - Simple Arithmetic Mean
  - Weighted Arithmetic Mean

# INDIVIDUAL, DISCRETE & CONTINUOUS SERIES

#### • Individual Data Series:

When data is given on an individual basis where data are listed out and all the observations have a frequency of 1.

#### E.g.: 5, 8, 12, 25, 28, 35, 80, 85, 91

#### • Discrete Data Series:

E

When data is given along with their frequencies. Data are listed out along with their corresponding frequency in the form of a table.

g.:	Marks X	No. of students
	4	6
	8	12
	12	18
	16	15
	20	9

(in inches)	students
60	12
62	18
64	10
66	6
68	4
	(in inches) 60 62 64 66

## INDIVIDUAL, DISCRETE & CONTINUOUS SERIES

#### • Continuous Data Series:

When data is given based on ranges along with their frequencies. The class intervals along with their corresponding frequency are listed out in the form of a table.

E.g.:	Class Interval :	0-10	10-20	20-30	30-40	40-50	50-60	60-70
0	Frequency :	7	18	34	50	35	20	6

## **ARITHMETIC MEAN – INDIVIDUAL SERIES**

#### **Direct Method:**

 $\overline{X} = \frac{\sum x}{n}$  where

 $\overline{X}$  = Arithmetic Mean  $\sum x$  = Total of all observations n = Number of observations

#### **Shortcut Method:**

$$\overline{X} = A + \frac{\sum d}{n}$$
 where

 $\overline{X}$  = Arithmetic Mean A = Assumed Value  $\sum d = X-A$ n = Number of observations
